

LASHLINE PRE-CARE INSTRUCTIONS

PREPARE YOUR SKIN

To perform cosmetic tattoo procedures, the skin must be healthy, hydrated, and moisturized on the day of your appointment. Please avoid prolonged sun exposure for at least 1 week prior to your procedure. Skin cannot be severely tanned or burnt on the day of your appointment.

If skin is overly dry, cracked, peeling, red/irritated, burnt, or has scabs on the day of your appointment we reserve the right to cancel your appointment.

EYE AREA PREPARATION:

- Do not wear contact lenses during or within 24 hours following the eyeliner procedure.
- Bring sunglasses to wear. Eyes may be light sensitive.
- Do not dye, perm, or curl lashes for 5 days prior to your appointment.
- Do not use eye make-up 3 days after the treatment
- Eyelashes extensions MUST be removed AT LEAST five days (5 days) before your eyeliner appointment. Failure to do this may result on refusal of service if there is glue residue in the procedure area.

CONTRINDICATIONS:

- Discontinue use of any eyelash growing serums like Latisse 1 month prior to the procedure.
- If you have had any type of eye surgery, you must get approval from your physician.
- Do not take any blood thinners such as Ibuprofen and Aspirin 24 hours before.
- You must wait at least 2 months after any cataract, LASIK, or blepharoplasty surgeries.

PAIN LEVEL

Though the sensation of micro-pigmentation is minimal, all clients will respond to pain differently. To alleviate possible discomfort, a strong topical anesthetic will be applied before and during the procedure.

*Please note that you will be more sensitive 5 days before, during, and 5 days after your menstrual cycle.

Do not take any blood thinners such as Ibuprofen and Aspirin 24 hours before. Tylenol can be taken 30 minutes before your treatment without any contraindications.
